

DOFFING: Removal of PPE Guidance

Without proper decontamination, or doffing, all the effort you use protecting yourself is useless.

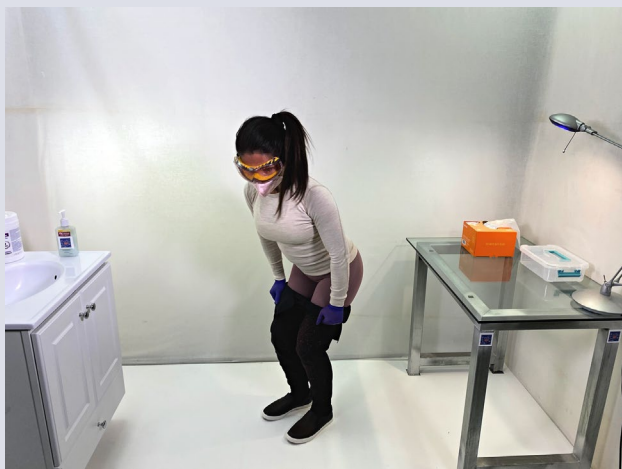

1. Virus Laden Worker in Practical PPE Outfit

2. Unzip and Roll off Top

3. Roll Off Bottoms and Step Out

4. Remove Shoes

5. Remove Mask and Goggles

6. Thoroughly Clean Face, Neck & Hands with Soap & Water

7. Put on New Gloves and place your Mask in a Recycle Bin

8. Place Contaminated Clothing in a Laundry Bag for Re-Use

9. Disinfect Goggles for Re-Use

10. Disinfect Shoes & Leave to Dwell for Re-Use

11. Remove Gloves, Wash Hands Again & You are Ready to Go Home

These are basic and simplified steps... for every one of the steps above, you must consult a professional doffing protocol.

**This is the PPE required for an actual virus protocol produced by a registered industrial hygienist to be used by employers. Its proper enforcement would be an absolute requirement for any employer to send an employee into a hazardous environment where the hazardous particulate size is .3 microns or greater.
